PROFESSIONAL SUMMARY

AWS DevOps Engineer with **2 years** of experience (including internship) in designing, automating and operating scalable, secure and highly available cloud infrastructure on AWS. Skilled in Infrastructure as Code (Terraform, CloudFormation), CI/CD automation (Jenkins, GitHub Actions, CodePipeline), containerization with Docker and Kubernetes (EKS), and monitoring with Prometheus, Grafana, ELK and CloudWatch. Strong grounding in cloud networking, security, disaster recovery and scripting with Python and Bash, with a focus on reliability, cost efficiency and faster release cycles.

TECHNICAL SKILLS

Cloud Platforms	Amazon Web Services (AWS), Microsoft Azure (Basic Knowledge)
AWS Services	EC2, S3, RDS, Lambda, VPC, IAM, Route 53, CloudFront, CloudWatch, Auto Scaling, ELB, EKS
Infrastructure as Code (IaC)	Terraform, AWS CloudFormation
Configuration Management	Ansible
Containerization & Orchestration	Docker, Kubernetes (EKS), Helm
Networking & Security	AWS Security Groups, NACLs, VPN, VPC Peering, WAF, AWS Shield
Disaster Recovery	Multi-AZ Failover, Automated Backups, DR Runbooks
Version Control	Git, GitHub
CI/CD Pipelines	Jenkins, AWS CodePipeline, GitHub Actions
Databases	SQL, MySQL
Monitoring & Logging	Prometheus, Grafana, ELK Stack, AWS CloudWatch, Splunk
Programming & Scripting	Python, Bash, PowerShell, AWS Lambda, PL/SQL, Java, Servlet, JSP
Project Management Tool	Jira

WORK EXPERIENCE

Associate – AWS DevOps | **The Zigma Technologies India (P) Ltd** **25/07/2025 – 26/04/2026**

DevOps Engineer | **Impact Infotech Pvt. Ltd** **15/04/2025 – 15/07/2025**

Roles & Responsibilities:

- Provisioned and managed AWS infrastructure (EC2, VPC, S3, RDS, ELB, Auto Scaling) using Terraform and CloudFormation to deliver consistent, repeatable environments.
- Designed and maintained CI/CD pipelines using Jenkins, GitHub Actions and AWS CodePipeline to automate build, test and deployment workflows.
- Containerized applications with Docker and deployed and managed workloads on Amazon EKS using Kubernetes and Helm.
- Implemented monitoring and alerting with CloudWatch, Prometheus, Grafana, ELK Stack and Splunk to improve system visibility and reduce incident resolution time.
  Enforced cloud security best practices using IAM policies, Security Groups, NACLs, WAF, AWS Shield, VPN and VPC Peering.
  Configured Multi-AZ failover, automated backups and DR runbooks, and automated operational tasks using Python, Bash and Ansible.

Intern – DevOps | **VR Shivin Technologies** **03/2024 – 04/2025**

- Supported deployment of applications on AWS EC2 and S3 and assisted in configuring VPC, IAM and Security Groups.
- Built basic CI/CD pipelines with Git, GitHub and Jenkins, and wrote Bash and Python scripts to automate routine tasks.
- Assisted in monitoring application health with CloudWatch and documenting environment setup and troubleshooting steps.

KEY PROJECTS

CloudMigration& Deployment Automation for Patient Portal

Client: Cigna Healthcare **Domain:**Healthcare

Roles & Responsibilities:

- Migrated the patient portal workloads to AWS using EC2, RDS and S3 with Multi-AZ deployment for high availability.
- Automated infrastructure provisioning with Terraform modules across dev, QA and production environments.
- Built Jenkins and GitHub Actions pipelines to automate build, test and deployment of containerized services.
- Secured the environment with IAM least-privilege roles, Security Groups, NACLs and WAF in line with healthcare data protection requirements.
- Implemented centralized logging and alerting using CloudWatch, Prometheus and Grafana for proactive issue detection.
- Documented DR runbooks and configured automated backups and failover to meet recovery objectives.

Secure CI/CD & Kubernetes Platform for Digital Banking

Client: Barclays **Domain:** Banking

Roles & Responsibilities:

- Deployed and managed containerized banking microservices on Amazon EKS using Docker, Kubernetes and Helm charts.
- Created end-to-end CI/CD pipelines with AWS CodePipeline and Jenkins, enabling faster and repeatable releases.
- Designed secure VPC architecture with private subnets, VPC Peering, VPN and controlled access through IAM and Security Groups.
- Configured Auto Scaling and ELB to handle peak transaction loads while maintaining performance and availability.
- Set up monitoring dashboards and alerts using ELK Stack, Splunk and Grafana to track application and cluster health.
- Automated configuration management and routine operations with Ansible, Python and Bash scripts.

High-Availability Claims Processing Platform on AWS

Client: MetLife **Domain:** Insurance

Roles & Responsibilities:

- Architected a highly available claims processing platform on AWS using EC2, ELB, Auto Scaling, RDS and Route 53.
- Implemented Infrastructure as Code using AWS CloudFormation and Terraform for consistent environment builds.
- Used CloudFront and S3 to deliver static content securely with improved response times.
- Developed AWS Lambda functions in Python to automate backups, notifications and scheduled maintenance tasks.
- Protected the platform with AWS WAF and AWS Shield and enforced access control through IAM policies.
- Tracked system performance and resource utilization with CloudWatch and Prometheus, and tuned resources to optimize cost.

EDUCATION

Bachelor of Technology (Information Technology) **2021 – 2024**

E.G. Spillay Engineering College
